GluttonousGecko is a backpack mounted computer – basically a laptop without a screen. It will mostly be used for VR and for gaming when travelling.

Green is a nice color, so I picked the Phelsuma nigristriata as the gecko species.

Ideally, the left 1/3 of the background should be left simple to not make it hard to read icons. Subject should, ideally, be towards the right 1/3 of the image.
3840x2160 resolution for futureproofing would be great.
